Professional 64-bit password recovery for Office/Rar/Zip

December 2011. Passcovery is expanding its suite of professional solutions with the release of 64-bit versions of the popular Accent Password Recovery tools. The latest versions leverage all the advantages of the Windows x64 system to recover lost passwords for Office/OpenOffice/Rar/Zip files.

When the professionals need software, they look for speed, functionality and advanced capabilities.

This is especially true for resource-heavy tasks like recovering passwords to Office/RAR/ZIP files.

Depending on the type and complexity of password used to protect a file, the recovery process can take a significant amount of time.

A successful password recovery solution has to boost speed and flexibility by reducing the number of scanned options and making smart use of the computer's resources, including all CPU kernels and graphics cards. Some of these conditions are only possible on 64-bit systems.

Passcovery Co. Ltd., a supplier of professional password recovery solutions, announces the release of 64-bit versions of its popular programs Accent OFFICE Password Recovery, Accent RAR Password Recovery and Accent ZIP Password Recovery to run on the 64-bit Windows system.

The new 64-bit solutions have optimized source code developed specifically for the x64 architecture that considerably boosts productivity when recovering passwords to Office and ZIP files.

What's more, the new 64-bit solutions have no limitation on the number of available kernels or memory imposed by x86 architecture. If necessary, all of the Accent Password Recovery programs are capable of leveraging all available RAM and more than 64 processor kernels.

Full support for 64-bit Windows and unmatched speed parameters make the Accent Password Recovery suite the choice of professionals using the latest in computing technology.

About Passcovery

Passcovery Co. Ltd. supplies high-speed, professional software solutions for recovering lost passwords. The first versions of these solutions were released in 1999. Today, the company's software is successfully used by law enforcement, government agencies, corporations and private individuals around the world.
